

Nouveal e-health has been chosen by Gustave ROUSSY to implement its new digital portal dedicated to patients' follow-up.

Gustave Roussy Institute, first European Cancer Center, implemented over 3 years ago a digital portal dedicated to patients' follow-up called 'MonGustaveRoussy'. Supported by the French start-up Nouveal e-health, the portal will be entirely renewed in December 2020.

According to Mikaël AZOULAY, Chief Information Officer (CIO) & Chief Digital Officer at Gustave Roussy :

“The project relies on ensuring the entire patients pathway's digitalization, from pre-admissions to the collection of real-life post-treatment data, while improving its fluidity and security”

Nouveal e-health redesigns Gustave Roussy Institute's digital portal in order to exchange all the elements required to ensure patients' follow-up throughout their entire care pathway. Digital services provided by Nouveal e-health will allow patients, and Gustave Roussy's healthcare professionals to improve their admissions process, the exchange of administrative and medical documents, the preparation of chemotherapy treatments, planning outpatient procedures, as well as managing the collection of real-life data.

About Gustave Roussy:

Gustave Roussy is the premier European Cancer Center, and a genuine pole of expertise in the cancer treatment field, entirely devoted to patients. It gathers 3 100 health professionals whose missions are to ensure patient care, research and teaching.

About Nouveal e-health:

Founded in 2013 in Lyon, Nouveal e-health is a French SME that develops digital connected healthcare solutions, and has been affiliated to the group La Poste since July 2020. Nouveal became a market leader in France in patient telemonitoring with its e-fitback, ONCO'nect, Léa Santé, and more recently Covidom solutions. Its expertise in the design of e-healthcare solutions and in managing development projects has enabled it to successfully provide project support to multiple public and private healthcare operators.

In 2015, the CAPIO group, recently taken over by RAMSAY Santé, was won over by the e-fitback app and became its first key client, at the time the market leader in Europe in enhanced recovery after surgery. At the same time, AP-HP and the oncology department at Henri MONDOR teaching hospital contacted Nouveal e-health in 2016 to co-create ONCO'nect, an oncology telemonitoring application, soon to be interoperable with the largest European Hospital's Digital Patient Record.
